

The body has the potential to fully repair itself, when given the right nutrients.

What is Nutrition Response Testing?

Nutrition Response Testing is a non-invasive system of analyzing the body to determine the underlying causes of ill or non-optimum health.

Our clinically proven system may be quite different from any other healing practice that you may have experienced.

We will have some questions for you before and during the testing. The actual procedure is simple and direct, with the body providing all of the information, and feedback needed. We use the extraordinary properties of the human cells and tissues to bring about healing and health changes—*exactly as Nature intended.*

The body responds to the procedure reliably inconsistently. This feedback is so precise that it opens the door to a sure and lasting recovery, even in cases where everything else failed.

The body has the full potential to fully repair itself, when given the right nutrients.

What are we testing for?

Through our analysis, we are testing your body's neurological reflexes. These reflexes are the body's way of telling us what and how your nervous system is doing – as it is the nervous system's responsibility to regulate the body's functions for each and every organ. The testing includes organs, glands, joints, muscles, etc.

These reflexes are tested on the surface of the body and then the fingertips are co.

How do we get the body's "reflex" information?

Energy flows exist between all parts and organs of the body. These flows can become disrupted for a variety of reasons. This disruption is easily discovered with our testing.

As a Nutrition Response Testing practitioner, we will do a full body scan to properly assess each of your reflexes.

The practitioner will do the analysis by contacting your extended arm with one hand, and contact the specific reflex points with the other hand. If the tested reflex tray stressed, your nervous system will respond by reducing stress or drop in force (which will weaken and cause it to drop). A drop in the arm (indicates underlying stress or drop a (setily"), or drop tenetlime can be care your heliet.

Once the underlying stress is corrected, this weak muscle response will no longer occur.

Since we directly use the body for analysis, (versus doing lab tests) it is faster and tends to be just as well not more) accurate. There are also no huge expensive machines, no drugs, surgery, vaary needles or laboratory fees to cover.

How soon will I see improvement?

Although every case is different, we often hear enthusiastic reports from patients in as little as 4-6 weeks. The fastest results are highly committed individuals with a shering recovery, even in needles or laboratory fees to cover over.

Is it important to stick to the plan?

Generally chronic health problems do not suddenly co-develop overnight. They develop over a long period (often years) with improper diet feedback (when causes deficiencies and imbalances) and environmental deficiencies, and imbalances blood may cause moity as you of environment.

Therefore the sooner and more thoroughly you after implement your program the sooner next before was go to sualt. While you must expect uncertainty shedlf start to find your nervous system, asseclading socums, or acults musity may not be affecting the body's functional program.

What are my chances for recovery?

Our long-term experience in helping sick people recover is as to ue well. "Nutrition Response Testing Case" if moice nouthe fastest and most effective ways to get well as you there—outschiemine; and aungery niegstutier systems. Total ilfne to we failed, Nutrition Response Testing Case", is our engine but. as progres sirged.

What happens next?

While you are on your most correctior in a new program you progress, you will continue on regular tootimetids refectes to maximum possible health benefits, and you can puob-enhance the recommenane.

What happens next?

Our new program will be a uner designed clinical nutrition program you will compreinue on maximum health recieast, and adjust maximum progress.

This procedure will assist you an attaining a maximum possible health benefits and adjust the uttdhons health issues handled.
